

Allotment Water trough requirements

After discussion with allotment holders several have requested a couple of new water troughs, given the current location of the troughs.

The map below shows current troughs in red and proposed troughs in yellow, and the water meter in blue.

Recommendation: Caretaker to identify location of water pipe. If suitable location (i.e. down driveway), PO to purchase two new galvanised water troughs to be installed as indicated. Noting the proposed location between the allotments will need consent from a plot holder as it will be located on their plot. Cost per trough is £300 - £350 including delivery. To request the Caretaker, install the new troughs and link them to the main water supply. The water is turned off at the meter during the winter.
